NEW MEXICO DEPARTMENT OF AGRICULTURE

OFFICE OF THE DIRECTOR/SECRETARY
Box 3189/Las Cruces, New Mexico 88003
Telephone (505) 646-3007

TO THOSE INTERESTED IN NEW MEXICO'S AGRICULTURE:

The New Mexico Department of Agriculture is happy to cooperate with the U.S. Department of Agriculture to provide information on New Mexico's agricultural industry. Statistics on agriculture are necessary for tracking the previous production activity and in providing insight for future business decisions. Readers of this publication include producers, agribusiness persons, legislators, academicians and the lay public. Each entity has its own agenda for use of this information and has expressed appreciation for the recording and publishing of detailed data in a readable and effective format.

We are pleased to continue this service to the public and especially hope it will provide help to farmers and ranchers as they chart their course for the coming year.

Sincerely,

W.P. Stephens

William P. Stephens
Director/Secretary

STATISTICAL REPORTING SERVICE • NEW MEXICO DEPARTMENT OF AGRICULTURE

ACKNOWLEDGMENT

The New Mexico Agricultural Statistics Service, U.S.D.A. in cooperation with the New Mexico Department of Agriculture is pleased to present the 1985 edition of New Mexico Agricultural Statistics. This is the twenty-fifth annual summary in the series which dates back to 1962.

This bulletin is a comprehensive report of agricultural statistics for New Mexico which includes estimates by county for major crops and livestock and cash receipts for these commodities. Also included are data on crop production, livestock inventory numbers, farm income, agricultural prices, grain in storage and agricultural weather data.

The data presented in this bulletin are developed primarily from sample surveys conducted by the Service throughout the year. The accuracy of the estimates is closely related to the voluntary responses by farmers, livestock producers and agribusiness to these surveys. A special "Thanks" is extended to those individuals who provided us with the facts about their operations. Without the excellent cooperation received from New Mexico's agricultural producers the estimates contained in this bulletin and other statistical reports published throughout the year would not be possible. We also wish to express our appreciation to those individuals who attended their respective annual county meetings and provided us with vital input for the county estimates program.

In closing, I want to thank the staff of the New Mexico Agricultural Statistics Service for their hard work and continued dedication in preparing this twenty-fifth bulletin. I also wish to thank the New Mexico Department of Agriculture for their continued support in assisting with the bulletin preparation and funding its publication.

Sincerely,

Donald G. Gerhardt

PRICES AND INCOME

ASSETS AND DEBTS - New Mexico farm and ranch assets totaled $9,116.0 million for the year ending December 31, 1984. This level represents an 8.7 percent decline from assets one year earlier, and a 7.3 percent drop from assets in 1982. Real estate accounted for 81.9 percent of all assets, as compared to 83.5 percent a year earlier. Farm and ranch debt in New Mexico totaled $1,387.6 million during the year ending December 31, 1984, 1.5 percent lower than debt in 1983, and 2.9 percent lower than two years earlier. Real estate debt accounted for 56.9 percent of total debt, compared to 57.1 percent one year earlier.

CASH RECEIPTS - The 1985 cash receipts from farm marketings in New Mexico totaled 1,068 million dollars, up 7 percent from cash receipts in 1984. Livestock and livestock products accounted for 67.2 percent of the total and were valued at 717.5 million dollars. Crops, valued at 350.8 million dollars, represented 32.8 percent of cash receipts. Cattle and calves continued to dominate all other commodities, accounting for 49.2 percent of all cash receipts. Wholesale milk was second with 12.8 percent, while hay remained third with 6.1 percent of the total. Wheat and chile ranked fourth and fifth, representing 5.7 and 3.2 percent, respectively. Sales from these five commodities made up 77.0 percent of all cash receipts in New Mexico farm and ranch marketings during 1985.

FARM INCOME CONCEPTS - Cash receipts from farm marketings represent gross income from the sales of crops, livestock and poultry during the calendar year. The value of home consumption of farm products, inter-farm sales of livestock, and crops fed on farms where grown are not included in cash receipts. Production expenses such as feed, fuel, and fertilizer, and marketing costs are not subtracted from gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed, and marketed in another county. Cash receipts from marketings of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price, and changes in inventories. Marketings of livestock and poultry include the sales value of an animal only once, usually at the time when the animal is sold for slaughter or at final disposition.

Gross farm income includes four principal components: cash receipts from farm marketings, government payments, other farm income, and non-money income. Cash receipts represent gross receipts from commercial market sales as well as loans made or guaranteed by the CCC and other purchases under price support programs. Government payments to farmers are those payments made directly to farm producers in connection with farm programs. Other farm income is cash income from such sources as recreation, machine hire, and custom work. Non-money income includes the rental value of housing provided by farm dwellings and the value of farm products consumed directly in farm households.

Farm production expenses include current farm operating expenses for such items as wages paid to hired farm workers, outlays for repairs of farm equipment and operation of the farm, as well as purchases of oil, feed, and livestock. Overhead-type costs include charges for depreciation and other capital consumption, taxes on farm property, and interest.

Net change in farm inventories is the estimated physical change in livestock and crops owned by farmers, valued at average prices prevailing during the year.

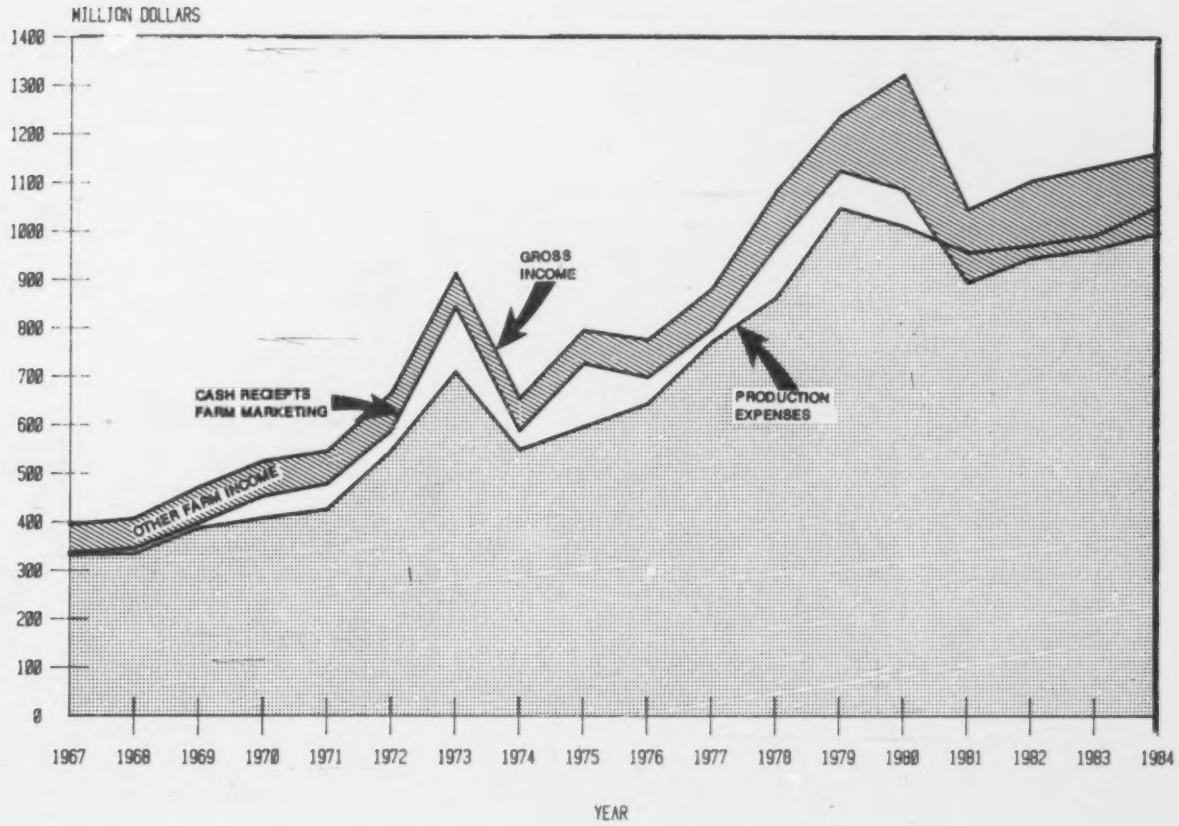
New Mexico Farm and Ranch Income and Expenses 1967-1984



INCOME - Gross income on New Mexico farms and ranches for 1984 was $1.16 billion, an increase of 3 percent from 1983 but was 9 percent below the 1980 record of $1.32 billion. Cash receipts from farm marketings were $997.9 million, up 3 percent from 1983. The other items contributing to gross income were: government payments at $49.2 million, down 14 percent; non-money income at $99.4 million, up 1 percent; and, other farm income at $17.0 million, up 23 percent. Cash receipts from marketings represented 86 percent of total gross farm income for 1984. Net farm income before inventory adjustment, the difference between gross income and production expenses, at $109.7 million, was down 23 percent from 1983. Total net farm income, which is income after adjustment for inventory changes, at $154.8 million was up 45 percent from 1983.

PRODUCTION EXPENSES - Farms and ranches in the State had $1.05 billion in expenses for producing their crops and livestock 1984, an increase of $61 million over 1983. This was the fourth consecutive year that production expenses exceeded cash receipts from marketings.

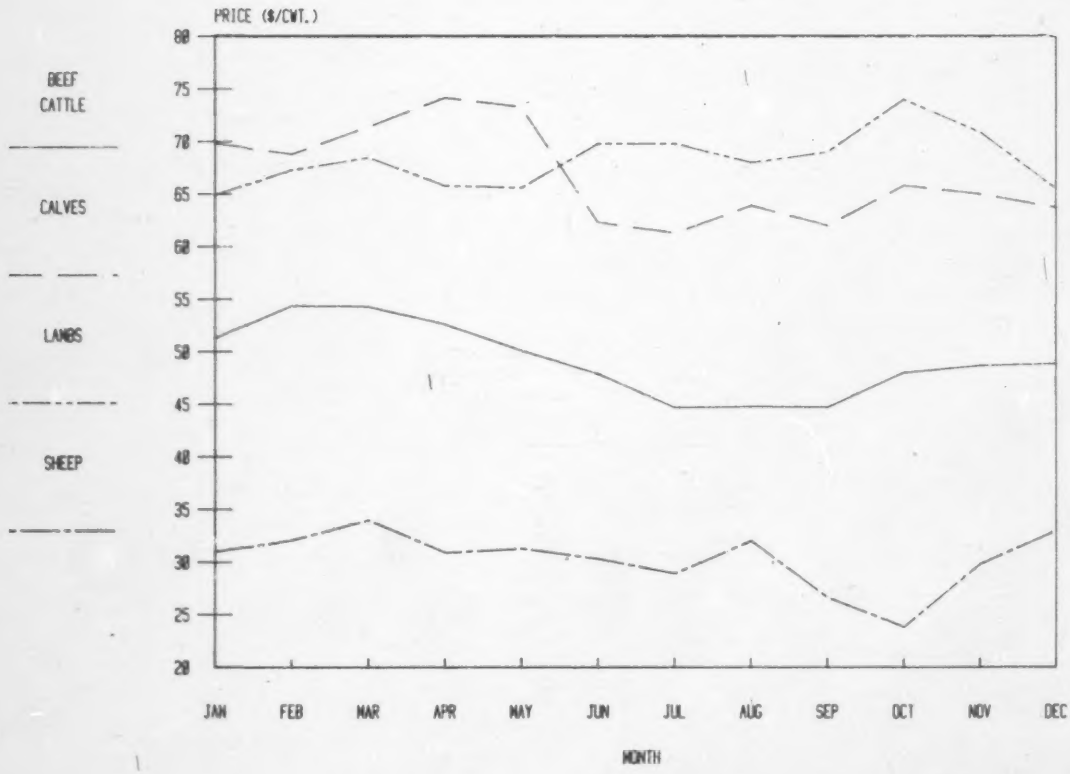
Livestock Prices Received, 1985



LIVESTOCK

Unlike the previous year livestock producers approached 1985 optimistically although somewhat guardedly. Most ranges and pastures had adequate soil moisture supplies and tank water, however the 83-84 drought had reduced range forage supplies and some ranchers had doubts as to the ability of winter pastures to carry herds until spring. The winter of 84-85 saw above normal moisture in the form of rain and snow. The months of January, February and March were unseasonally mild resulting in below normal death losses.

Moisture during the spring continued above average bringing forth an abundance of spring feed. However, it also resulted in excessive growth of toxic weeds which caused more than normal death losses to livestock, especially to calves and lambs.

With livestock prices, except for cows and hogs, somewhat higher than recent years plus sufficient range feed and tank water, most livestock producers were optimistic for 1986.

At year's end, the number of cattle and calves on New Mexico's farms and ranches was estimated at 1,390,000 head, down 1 percent from January 1, 1985 and the same as January 1, 1984. This was in line with the reduction in the rest of the country which was down 4 percent. Beef cows and calves under 500 pounds were down 2 percent; bulls, down 1 percent; other heifers, down 4 percent; while replacement heifers, both for milk and beef, and steers remained unchanged. The 1985 calf crop at 535,000 head was 1 percent below 1984.

New Mexico's sheep industry ended 1985 with 525,000 head on hand, down 2 percent and the lowest January 1 inventory of record. The 1985 lamb crop estimated at 325,000 head was down 4 percent.

Hog and pig inventory on December 1, 1985 was estimated at 38,000 head, 9 percent more than on December 1, 1984. This was 27 percent above 1983 and the same as December 1, 1982.

FIELD CROPS

New Mexico crop producers established several yield and production records for major crops in 1985. The most notable of records set was by wheat growers as new levels were reached for harvested acreage, yield, and production. The 1985 wheat production was nearly double that of recent years. Yield records were also set for corn cut for grain, alfalfa hay, and American-Pima cotton. Record production was established for corn silage and potatoes, in addition to wheat. Weather conditions during the year were favorable for most crops, except for cotton on the east side of the State. Untimely rains during spring planting either washed out fields or promoted moisture related diseases that essentially strangled Roosevelt County cotton. But the carryover moisture from 1984 and above average precipitation in 1985 stimulated most other field crops, particularly on dryland fields. Surface water supplies were more than plentiful on March 1, as forecasts predicted nearly twice the normal runoff for the lower Rio Grande Basin. Above average rains continued to fall over much of the State following the spectacular summer wheat harvest. Feed grain, cotton, and alfalfa harvestings were better than normal, as were peanut and potato crops. Unfortunately, the above average production situation only further depressed the already slumping price outlook; not only in New Mexico, but Nationwide as well. Planting of the 1986 wheat crop was virtually complete by October 1. Excellent moisture was received soon after planting, but by January 1, 1986, dryland fields were in need of winter rains or snow to carry the crop into spring. For the second year in a row, New Mexico crop producers had realized better than average growing conditions to operate under. The economic climate, however, continued to cloud an otherwise successful crop year.

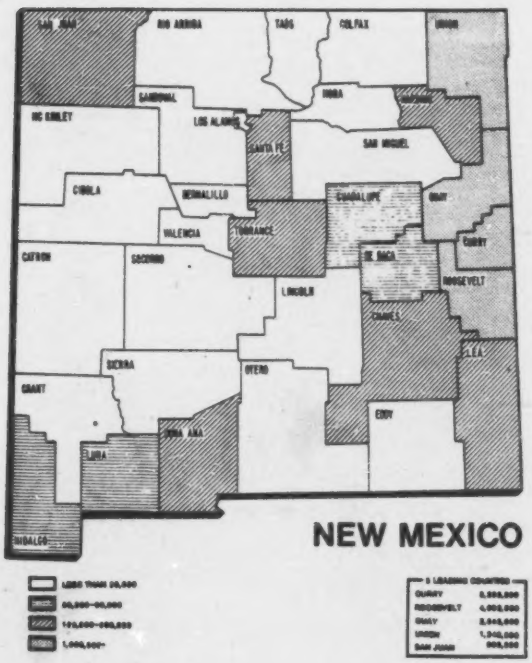
Wheat Bushels Produced 1985



New Mexico wheat production reached a record 20,520,000 bushels in 1985. This level was 72 percent above 1984 production and 51 percent higher than 1983. Area planted to the 1985 crop was unchanged from the previous year, at 730,000 acres. Wheat harvested in 1985 totaled 570,000 acres, up 24 percent from 1984 and also a record. Ideal growing conditions throughout the crop year resulted in yet another record, yield per acre. Growers cut an average 36 bushels per acre in 1985, 10 bushels higher than the previous year. Only one previous yield of record, in 1966, has surpassed the 30 bushel mark. Although a production of this magnitude had not been seen before 1985, prices received by farmers moved in the opposite direction. An average $3.25 per bushel was received for the 1985 crop, down 11 cents per bushel from 1984 and the lowest season average since 1978. The total value of 1985 production reached a record $66.7 million, up 66 percent from a year earlier. Wheat stocks on January 1, 1986, totaled a record 9.0 million bushels in New Mexico.

Fruits, Nuts and Vegetables

New Mexico apple orchards increased in production for the second consecutive year in 1985. Apple growers produced 10 million pounds of the fruit in 1985, an increase of 2 million pounds, or 25 percent, over 1984. The average yield per bearing tree was 76.9 pounds, compared with 61.5 pounds one year earlier. The price received by apple producers averaged 13.4 cents per pound, or $5.55 per bushel. This compares with $7.18 per bushel received for the 1984 apple crop. Value of the 1985 crop dropped 4 percent to $1,340,000.

New Mexico's 1985 pecan production was 26.0 million pounds, in-shell basis, 8 percent above the previous year's crop of 24.0 million pounds. The 1985 production is the second highest on record. The record high production was set in 1983 with 29.0 million pounds. The harvest of the 1985 crop was assisted significantly by good weather during the harvest season.

Prices received by New Mexico pecan growers were 5 cents, or 6 percent, higher than prices received for the 1984 crop. The value of the 1985 crop was 22.88 million dollars, 15 percent above the value one year earlier.

Lettuce, a cool season crop, has two distinct growing seasons in New Mexico: spring and fall. Spring lettuce production for 1985 was 356 thousand hundredweight, 34 percent greater than the previous year's level. Fall production was 300 thousand hundredweight, 3 percent below fall production in 1984. The average spring price per hundredweight was 8.60 dollars while the average fall price was 9.10 dollars. The combined spring and fall value was 5.8 million dollars. In 1985, spring and fall New Mexico production accounted for 1 percent of the total U.S. production.

The major varieties of commercially grown onions in New Mexico include Grano, Granex, Sweet Spanish, and Mid-Summer Hybrids. Onions grown in New Mexico are primarily shipped for fresh market. Harvest usually begins in late May and continues through September. New Mexico onion production in 1985 was 1,463 thousand hundredweight, up 7 percent from the previous year's production of 1,365 thousand hundredweight. The total value of production was 19.5 million dollars, an increase of 21 percent over 1984's level. In 1985, New Mexico production accounted for 52 percent of total U.S. summer non-storage production.

1/ A 5:1 ratio was used to convert green tonnage to a dry weight equivalent.

Las Cruces Sun News Photo

Production from the 1985 chile crop set a new record high at 29,900 dry equivalent tons. The previous record was set in 1983 with 27,500 dry equivalent tons. This increase in production is attributed to the 14 percent increase in harvested acreage from the previous year. Acreage in the State is estimated at 19,300 acres. The value of production also set a record high at 33.6 million dollars. The average price received by farmers increased 25 dollars per dry equivalent ton to 1,125.00 dollars. Yield per acre dropped 3 percent from last year to 1.55 dry equivalent tons per acre. The amount of processed green chile increased 5,500 tons over 1984 to 35,300 tons. Processed red chile tonnage increased 6 percent to 15,100 tons. Of the total processed green tonnage, 84 percent was of mild varieties. Of the total processed red tonnage, 73 percent was of mild varieties.

Commercial grape acreage in New Mexico leveled off during 1985. Acreage for 1985 is estimated at 4,150 acres. The 1984 acreage was revised downward to 4,050 acres, indicating only a 100 acre, or 2.5 percent, increase in acreage from 1984 to 1985.

The number of commercial vineyards remains unchanged at approximately 70. Over 90 percent of all grape acreage is located in Hidalgo, Luna, Sierra, and Socorro counties. The total number of vines is estimated at 2,905,000. The 1984 figure was revised downward to 2,632,500 vines.

Grape production increased significantly as newly planted vineyards came into production. Production in 1985 is estimated at 1,990 tons, 431 percent greater than in 1984. Approximately 1,820 tons, or 91 percent, were used for commercial wine processing. The remaining 170 tons were either sold as fresh market grapes, used on the farms where produced, or donated for charitable purposes.

PUBLICATIONS ISSUED BY THE NEW MEXICO AGRICULTURAL STATISTICS SERVICE

NEW MEXICO AGRI-INFO

A 2-4 page report issued twice monthly. Major topics include:

---Agricultural Prices - Monthly
---Grain Stocks - Quarterly
---Cattle on Feed - Quarterly
---Livestock Shipments - Quarterly
---Milk Production and Cow Numbers - Quarterly
---Egg Production - Quarterly
---Vegetables, Fruits, and Nuts - Seasonal
---Range and Pasture Conditions - May through November
---Crop Moisture Map - May through November
---Wool Production - April
---Hogs and Pigs - Quarterly
---Livestock Slaughter - Monthly

WEEKLY CROP WEATHER

A 2 page report issued each Monday.

---Temperature and Precipitation for Selected Locations
---State Weather Summary
---Crop Conditions and Progress
---Range and Livestock Conditions

CROP ACREAGES AND PRODUCTION

A 2-4 page summary issued after each of the four major crop surveys (February Intentions, June Acreage, Wheat Seedings, Annual Summary).

LIVESTOCK INVENTORY AND PRODUCTION

A 2 page summary issued annually for cattle and calves, sheep and lambs, and dairy.

CHILE SUMMARY

A 2 page annual summary of the New Mexico chile crop issued in March.

GRAPE SUMMARY

A 1 page annual summary of the New Mexico grape crop issued in March.

NEW MEXICO AGRICULTURAL STATISTICS

A comprehensive report of agricultural statistics for New Mexico.
